8. Phase 5 – Deployment & Final Documentation

Make Update Set Complete

- Go to All menus → Search Local Update Sets.
- Under System Update Sets select Local Update Sets.
- Open Project Update Set.
- Change State from In progress to Complete.
- Save the form.
- Under Related Links click Export to XML.
- The Update Set data will be downloaded as an XML file.
- The XML file can be shared through WhatsApp or email.
- The Update Set can be transferred to another environment.

Conclusion

The Auto Ticket Classification using Flow Designer project provides an end-to-end automation solution for a school IT helpdesk. It reduces manual ticket categorization, improves response efficiency, uses dependent choice fields for data accuracy, and sends automated email notifications. The no-code design is maintainable and scalable, and can later be extended with assignment automation, SLA tracking, and predictive capabilities.
